```csharp
1  using System;
2  using System.Collections.ObjectModel;
3
4  namespace ClassLesson
5  {
6      internal class Teacher
7      {
8          public String? TeacherName { get; set; }
9          public ObservableCollection<Course> TeachingCourses { get;
              set; } = new ObservableCollection<Course>();
10
11         public override string ToString()
12         {
13             return $"{TeacherName}";
14         }
15     }
16 }
```
